

# ecowec sewerHEAT

## **Ecowec sewerHEAT – Energy efficiency for property heating**

With the Ecowec sewerHEAT system, a property's wastewater becomes a source of heat. The heat contained in the wastewater is recycled back into the property and domestic water heating. The system can, for example, significantly reduce the need for district heating or reduce the number of wells in geothermal systems.

## **Ecowec sewerHEAT system delivery content**

The system's equipment is selected and sized according to the property's heat requirements. The system is delivered as a single equipment package with connection instructions, which the plumbing contractor installs on-site. The equipment delivery includes start-up support and warranty period remote monitoring.

## **Ecowec sewerHEAT is a sustainable choice**

The Ecowec sewerHEAT system saves on energy costs while also being a step towards a more sustainable future. Ecowec's vision is to create solutions that benefit both customers and the environment. The Ecowec sewerHEAT system is a practical example of this vision: it is an investment not only in savings but also in a cleaner and greener future.
